GET DRY

Select Elevator Waterproofing is your solution for flooding and water problems in your wet elevator pit.

With over 20 years experience in basement waterproofing our highly-trained professional team use their expertise and knowledge to keep elevator pits dry once and for all.

Elevator pits are constantly flooding as they are subgrade and the lowest lying area in a building. Standing water can cause health related issues every time the elevator door opens and the compressed air flows out.

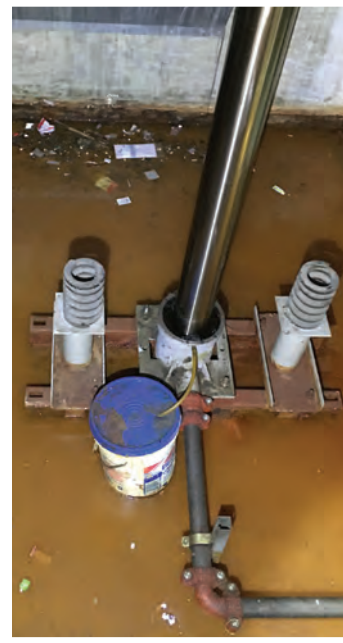

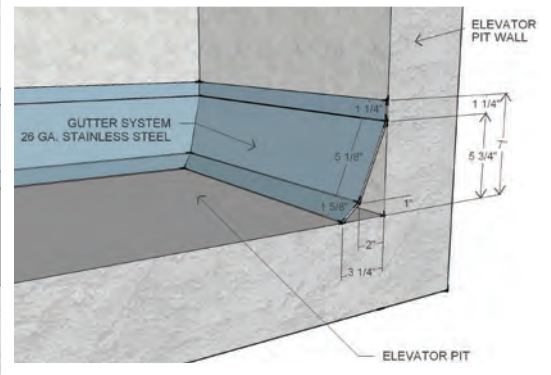

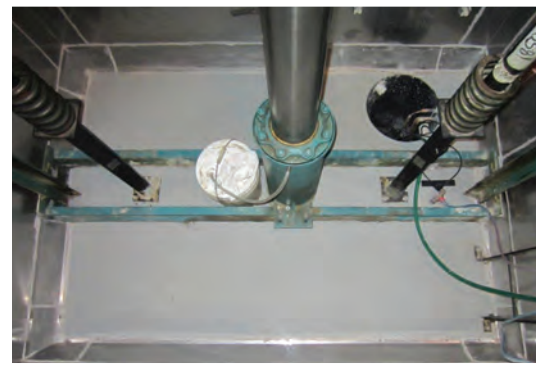

This water might be combined with oils, urine, or trash, which could cause airborne related illnesses and mold issues, possibly creating Sick Building Syndrome.

Water damage also causes costly elevator part repairs and constant headaches for building owners.

Here at **Select** we are revolutionizing the pit industry with our waterproofing solutions to keep a dry, healthy and safe pit!

XYPEX Products

Select uses XYPEX Concentrate and Patch'n Plug – both elite commercial grade products – and other waterproofing tools in our fight against intruding water. XYPEX Concentrate and Patch'n Plug causes a catalytic reaction that produces a non-soluble crystalline formation within the pores and capillary tracts of concrete and cement-based materials. These products are used to seal strips at joints and repair cracks preventing the penetration of water.

Escalators Get Flooded, Too.

Because escalator pits are easily overlooked, Select brings their expertise to them as well. Providing water and oil removal, waterproofing and overall cleaning, we will make it a Safe Pit.

Fit Pit Systems

Fit Pit is a cutting-edge system covering all aspects of the waterproofing and water evacuation process from elevator pits. Water levels within the collection site is monitored and the information is sent to the control panel, so there's no longer a need to enter the pit (which is part of our overall safety features).

Patent Pending

Green Smart Pit

Select's, patent pending, oil monitoring recycling system will communicate the flow of fluid coming from the piston, so you never have to guess when your shaft packing is going to fail – saving you time and costly repairs.
